

# EnviroGenix

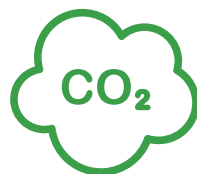

**Renewable,  
sustainable,  
environmentally  
safe cleaning  
products are here...**

# OUR PRODUCTS

The bottles used in the range are made from 100% Post Consumer Recycled Plastic (PCR) reducing CO2 emissions by 85% compared to virgin plastic. The plastic used has been recycled rather than sent to landfill and collected from local sources. No virgin plastic is used in our PCR bottles.

EnviroGenix encourages users to retain sprayer bottles by refilling from the corresponding concentrated product, using a pelican pump or container cap. Keep the pumps/trigger so these can be re-used. By re-using and refilling your empty bottles will help reduce plastic consumption and the impact on the environment.

In addition to the PCR bottles, all labels and bottle caps can be recycled.

Outer cardboard cartons are made from 100% recycled material and can be recycled

Sustainable production using responsible local resources.

Products are vegan friendly and have not been tested on animals

100% of the range is produced to ISO 9001 standards and ISO 14001 environmental certification and accredited to Carbon PAS2060 for carbon neutrality

**Comprising a collection of 20 distinct products, the EnviroGenix range not only prioritises environmental sustainability and meets customers' green criteria but also provides a more thorough cleaning experience.**

**It effectively cleans even the most hard-to-reach areas that conventional methods often struggle to tackle, all while ensuring surfaces remain undamaged and their luster intact. Additionally, EnviroGenix presents a highly efficient and non-toxic solution for cleaning surfaces in diverse settings, ranging from kitchens to washrooms.**

## **Innovative vegan formulation**

The entire product line of EnviroGenix utilizes raw materials sourced from plant-based extracts, prioritizing both human well-being and environmental preservation. All products are crafted to be vegan-friendly and have undergone no animal testing, further emphasizing their commitment to ethical practices.

## **Revolutionary cleaning**

By harnessing the power of nature, these innovative cleaning solutions offer exceptional performance while minimizing the environmental impact. Derived from renewable plant sources, these chemicals provide effective cleaning without compromising human health or harming ecosystems.

**This vision of sustainability goes further than harnessing the power of nature within the cleaning products, it is a business model applied to all elements of the product.**

All packaging is recycled and/or recyclable. Products also come concentrated, so you get more uses out of a container

Since products are packaged into PCR (post-consumer recycled) bottles, CO2 emissions are reduced, and physical plastic pollution removed. Furthermore, outer boxes are made from 100% recycled and FSC certified cardboard.

## Take a look at features of the EnviroGenix range...

*Reduced CO2  
Emission*

*Post-Consumer  
Recycled Bottle*

*Vegan  
Tested*

*100%  
Biodegradable*

*Access to  
health and  
safety data*

*Plant Based  
extracts*

# MOULD & MILDEW

## Features and benefits:

**Concentrated liquid** reducing plastic waste, CO2 emissions and usage cost.

**Kills 99.9% of Bacteria and Viruses\*:** Including Covid-19 Virus\*

**Tough on Mould and Mildew:** This powerful formula works on even the most ingrained mould that can cause allergic reactions.

**Effortless Cleaning:** Contains plant based ingredients that attack grime, grease and dirt, with no need for scrubbing.

**Deals with Unsightly Mould:** Leaves kitchen and bathroom surfaces sparkling clean, and is suitable on tiles, grout, chrome and stainless steel.

**Fresh Smelling and Antibacterial:** Cleans away germs with a fresh, long-lasting fragrance.

**Works on Stains:** For the effective cleaning of discoloured grout caused by mould.
